

### product type designation

product description

### Charging cradle for 10 transponders

Charging cradle made of plastic as table device or for wall mounting (without power supply unit)

-- spare part -- SIMATIC RTLS accessory charging cradle for transponder, without power supply unit for parallel charging of 10 tags of the type RTLS4083T and RTLS4040T.

suitability for use

For parallel charging of up to 10 transponders in the housing type of the RTLS4083T via spring contacts with magnetic retainer

suitability for operation

for transponder RTLS4083T and power supply unit 6GT2790-0DD40

### supply voltage, current consumption, power loss

type of voltage / of the supply voltage

DC

supply voltage / at DC

5 V

consumed current / maximum

6000 mA

### electrical data

number of electrical connections

11

type of electrical connection

P1J: ID 2.1 x OD 5.5 / 10 charging contacts for transponders

### mechanical data

material

Plastic enclosure (PC 10 GF)

color

Ti gray

### ambient conditions

ambient temperature

- during operation
- during storage
- during transport

-10 ... +50 °C  
-10 ... +50 °C  
-10 ... +50 °C

protection class IP

IP00

### design, dimensions and weights

design

Desktop unit

width

298.4 mm

height

81.5 mm

depth

179 mm

net weight

1092 g

installation or assembly note

Table device or wall mounting

### standards, specifications, approvals

reference code

- according to IEC 81346-2:2019

XDE

## Security information

security information

Siemens provides products and solutions with industrial cybersecurity functions that support the secure operation of plants, systems, machines and networks. In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial cybersecurity concept. Siemens' products and solutions constitute one element of such a concept. Customers are responsible for preventing unauthorized access to their plants, systems, machines and networks. Such systems, machines and components should only be connected to an enterprise network or the internet if and to the extent such a connection is necessary and only when appropriate security measures (e.g. firewalls and/or network segmentation) are in place. For additional information on industrial cybersecurity measures that may be implemented, please visit [www.siemens.com/cybersecurity-industry](https://www.siemens.com/cybersecurity-industry). Siemens' products and solutions undergo continuous development to make them more secure. Siemens strongly recommends that product updates are applied as soon as they are available and that the latest product versions are used. Use of product versions that are no longer supported, and failure to apply the latest updates may increase customer's exposure to cyber threats. To stay informed about product updates, subscribe to the Siemens Industrial Cybersecurity RSS Feed under <https://www.siemens.com/cert>. (V4.7)
